- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

Other Site Characteristics

Zona esteparia de relieve muy suave, ubicada en la depresión o cubeta sedimentaria de la cuenca baja del Río Jabalón, en la Comarca del Campo de Calatrava, al sur de Ciudad Real. En cuanto a la geomorfología, destaca la presencia de importantes manifestaciones volcánicas, resaltando por su interés la alineación eruptiva de carácter fisural de Zuriaga- Ciruela- Cantagallos, de alto grado de conservación, en que se conjuntan diversos tipos de aparatos volcánicos (conos estrombolianos, maares e intrusivos), de gran diversidad petrológica. Destacan en esta alineación volcánica las unidades del Volcán de La Zuriaga, el conjunto de Casas de Ciruela, el Volcán del Mirador y los Maares de Cantagallos.

4.2 Quality and importance

Area cultivada con hábitats bien conservados de pastizales mediterráneos xerofíticos, de gran interés para las aves esteparias, albergando poblaciones de alta diversidad y riqueza, destacando la población de avutardas, especialmente durante el periodo invernal, así como la de Sisón, Ganga o Alcaraván, entre otras. A lo largo del curso del Río Jabalón, se presentan formaciones de vegetación hidrofítica como juncales, tamujares y de vegetación acuática (*Potamion pectinati*).
