4.1 General site character

Other Site Characteristics

La zona se ubica en la comarca natural de la Mancha Baja de Cuenca, principalmente en el término municipal de San Clemente, aunque con participación también de los términos municipales de Santa María del Campo Rus, El Cañavate, Vara de Rey, Casas de Fernando Alonso y Casas de los Pinos. Consta de dos subzonas, más amplia la del norte. El relieve es llano o muy suavemente ondulado, con el río Rus como único cauce destacable, si bien de carácter temporal.

4.2 Quality and importance

Se trata una amplia superficie de áreas cultivadas, básicamente de cereal de secano, viñedo y girasol. En la subzona norte, se intercalan pequeñas superficies de pastizales y matorral leñoso bajo, tipo tomillares y estepa yesosa de *Gypsophyla struthium*, en ocasiones repoblados con *Pinus halepensis* y *Pinus pinea*. En la subzona sur, hay mucha mayor participación de viñedos acompañados de pequeñas manchas de pinar de *Pinus pinea* y encinar de *Quercus ilex*. La importancia de la zona radica en una variada y bien equilibrada representación del conjunto de especies típicamente esteparias, destacando las abundantes colonias de cernícalo primilla (las más importantes de la provincia) y las zonas de pastizales y eriales ocupadas por pteróclidos reproductores. Se trata del segundo núcleo de importancia para la avutarda a nivel provincial. También alberga las poblaciones de alondra de Dupont en estepas más térmicas de la provincia.
